

TRANSMISSION TOWER - HEIGHT 76 M

KD Consulting & Biuro Inżynierskie
Michał Nowicki
Poland

PROJECT DESCRIPTION

- Location: Poland
- Engineering office: Biuro Inżynierskie Michał Nowicki
- Dimensions: Survey project of transmission tower Height 76m

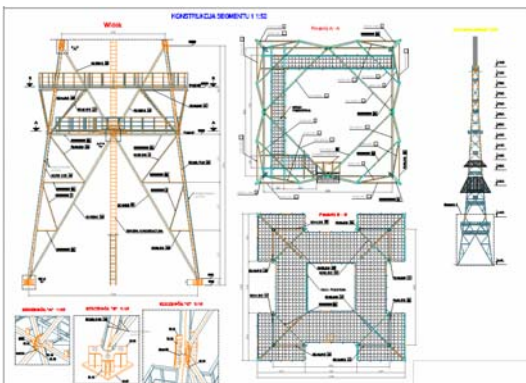

THE CHALLENGE

- Tight deadlines for the creation of the survey project of a transmission tower
- Prepare model of existing structure
- Propose new geometry solutions and prepare complete documentation

THE SOLUTION

- Additional verification of the construction's mass set up during the calculation of the resistance
- Possibility of preparing proper documentation – all necessary technical drawings as well as axiomatic views of complex elements of the construction "readable" for site engineers.

"Advance Steel does not only give the opportunity to create complete workshop documentation, it also provides a lot of very useful information for the design and construction process. Professional technical support is a big advantage especially in the phase of the software implementation and regular work afterward."

Mr Nowicki, Main Designer

USERS' BENEFITS

- Easy way to create any connection between steel elements
- Easy creation of spatial geometry of truss

ADVANCE STEEL
