Poland

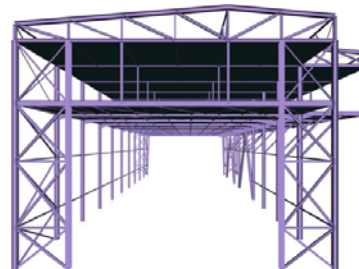

Business issues

- Steel construction made of 12 frames which creates one level of superstructure to existing manufacture hall.

Business results

- Advance Design has user friendly interface which is very useful and intuitive in structure modeling – possibility to prepare clear and complete F.E. model for analysis.
- Possibility of preparing static calculation results in very attractive graphical form.
- Easy model transfer and synchronization between Advance Design and Advance Steel.

" Make use of interoperability between Advance Design and Advance Steel makes calculation and detailing processes very quick and efficient. Moreover, Advance software supports designer in case of any changes in the model and documentation during all stages of the project cycle."
